

Commissioning Analytics

Full-time | Remote, USA, Ireland, Canada, or other | Infinite Built

About the role

We are looking for someone to deliver Built Insights analytics services to commissioning and QA/QC clients, turning their CxAlloy project data into dashboards, Smart Markups and reporting that teams and owners actually use. The role sits between commissioning and analytics, so you need to understand both.

What you will do

- Build and maintain portfolio dashboards and reporting from CxAlloy and other project data sources.
- Scope analytics work with clients, from tagging dashboards and asset readiness views to schedule tracking and vendor performance.
- Map client commissioning data to dashboards, Smart Markups and reporting views.
- Deliver work through an agile, managed service model with a regular delivery cadence.
- Support demos and walkthroughs of analytics deliverables for project teams and senior stakeholders.
- Work alongside Customer Success and Product to keep dashboards current as requirements evolve.

What we are looking for

- Background in building commissioning, QA/QC or MEP project delivery, with an understanding of how the data is captured.
- Comfortable working with project data, dashboards and reporting.
- Familiarity with CxAlloy or similar commissioning and QA/QC platforms is a strong benefit.
- Experience with analytics or BI tools such as Power BI, and with data mapping, is a plus.
- Familiarity with construction data sources such as Procore, ACC or P6 is a plus.
- Able to translate what a client needs into a clear analytics deliverable.
- Organised, detail oriented and comfortable managing several client deliverables at once.

Why this role matters

Teams already capture the data in CxAlloy. This role turns it into reporting that shows progress, risk and readiness across their portfolio.

What We Do

Infinite Built is the exclusive distributor of CxAlloy and Built Insights. Software used by commissioning, QA/QC, and project delivery teams across complex buildings, data centres, and mission critical infrastructure.

CxAlloy manages the day-to-day commissioning workflow: issues, checklists, tests, equipment records, and project documentation in one place. Built Insights extends that data into portfolio analytics, reporting, and smarter project visibility.

CxAlloy has been around long enough to have shaped how a lot of commissioning teams work. The platform supports teams across 35+ countries. Built Insights is the next layer. The team is small, we like working together, and the work moves quickly.

Why You Should Work With Us

We are a small, remote-first team across the US, Canada, the UK, Europe and Ireland. You will work directly on the product, with real ownership and room to shape how we work. We want people who build alongside us, not in isolation.

Location

Remote, based in the USA, Ireland, Canada, or other. Applicants must have the right to work in the country they are based in. This role does not include visa sponsorship.

Some roles include occasional travel. Any travel is noted on the individual role.

How to apply

Apply through the link provided on each role or email sales@infinitebuilt with name, email and LinkedIn profile.
