

Web Developer

Full-time | Remote, USA, Ireland, Canada, or other | Infinite Built

About the role

We are looking for an in-house Web Developer to own our marketing sites across Infinite Built, and CxAlloy. A big part of the job is keeping the sites easy to update, so marketing can add content without a developer in the loop for every change.

What you will do

- Build and maintain our marketing websites and landing pages.
- Keep the backend clean, well structured and future-proof, so the sites stay easy to edit and hand over.
- Make it fast and simple to add new content, including blog posts, knowledge articles, videos and carousel items.
- Work with marketing and design to turn campaigns into clean, responsive pages.
- Maintain and improve our sites, including performance, SEO basics and HubSpot connection integrity on live pushes.
- Build web tools, forms and integrations that support lead generation and reporting.
- Troubleshoot issues, write up QA items, and keep the web stack current and secure.

What we are looking for

- Solid experience building and maintaining websites, ideally including WordPress.
- Strong HTML, CSS and JavaScript, and comfortable with responsive design.
- Able to build a backend that a non-developer can update day to day, not one that needs custom code for every change.
- Experience with marketing sites, landing pages and web forms.
- Familiarity with SEO, analytics, site performance and HubSpot.
- Comfortable working closely with marketing and design in a small team.
- Experience with modern frameworks such as React, and with integrations and APIs, is a plus.
- Able to work independently and manage your own priorities.

Why this role matters

Our websites are often the first thing a prospect sees. This role keeps them fast, clear and current so our go to market work lands.

What We Do

Infinite Built is the exclusive distributor of CxAlloy and Built Insights. Software used by commissioning, QA/QC, and project delivery teams across complex buildings, data centres, and mission critical infrastructure.

CxAlloy manages the day-to-day commissioning workflow: issues, checklists, tests, equipment records, and project documentation in one place. Built Insights extends that data into portfolio analytics, reporting, and smarter project visibility.

CxAlloy has been around long enough to have shaped how a lot of commissioning teams work. The platform supports teams across 35+ countries. Built Insights is the next layer. The team is small, we like working together, and the work moves quickly.

Why You Should Work With Us

We are a small, remote-first team across the US, Canada, the UK, Europe and Ireland. You will work directly on the product, with real ownership and room to shape how we work. We want people who build alongside us, not in isolation.

Location

Remote, based in the USA, Ireland, Canada, or other. Applicants must have the right to work in the country they are based in. This role does not include visa sponsorship.

Some roles include occasional travel. Any travel is noted on the individual role.

How to apply

Apply through the link provided on each role or email sales@infinitebuilt with name, email and LinkedIn profile.
